

ABSTRACT

5 A method for manufacturing products with a  
coating, wherein from at least one mass comprising at least  
natural polymers, a base product is manufactured, while to  
at least one part of the product, a coating is applied, a  
coating being used having a surface tension which is  
approximately equal to or preferably lower than the surface  
10 tension of a portion of the mass, at least of the or each  
relevant part of the base product to which the coating is  
applied.
